

# BAMBOO WIPES

Wipe cloths are commonly manufactured using different combinations of materials, nearly always including Polyester as a cheap way to reduce costs.

Every cloth used and disposed of introduces more plastic into our environment. For this reason, we have developed the BIOWIPE to offer a more environmentally friendly option.

It is made using natural Biodegradable Bamboo fibres and NO plastic.

45m roll, with 90 perforated sheets.

Thick, absorbent and strong, this is the best wipe we've produced yet.

### 3.2.3 Environmentally responsible

1. Moved to using a 100% Natural biodegradable Bamboo fibre product. Biowipes. This has replaced the current cloth that contains polyester and plastic fibres. This will reduce our environmental impact.
2. No plastic in the packaging of this product. Wrapped in paper. Carton sealed with paper tape. No plastics at all!

### 2.1.2 Health practices and procedures

1. This product is colour coded for use in specific areas.
2. Greatly reduces the risk of cross-contamination when cleaning.
